

Tecamin Max

Batak ang tanim sa Tecamin!

FERTILIZER

DESCRIPTION:

Powerful biostimulant to promote the growth of fruiting and leafy vegetables, and perennial industrial crops.

CONTENT:

Amino acids, "L" Amino acids, Nitrogen (N)

FEATURES & BENEFITS:

- Optimizes the plant's central metabolism to enhance plant growth
- Activates the nitrogen cycle to enhance productivity
- Protects plants against abiotic stress
- Improves plant health status

TIMING OF APPLICATION

Fruiting and leafy vegetables - 15 and 25 days after transplanting (DAT)

Perennial industrial crops (banana) - 7 days after planting with 2 weeks interval before transplanting in the field)

DOSAGE RATE:

Fruiting and leafy vegetables - 2L / ha (at 400L spray volume per ha)

Perennial industrial crops (banana) - 100mL solution per seedling using the rate of 5mL product / L water (0.5 mL product per seedling)
